Vent-A-Hood Undercabinet Extender

Introducing the Vent-A-Hood extender: a non-combustible filler piece to use on the back side of ANY undercabinet hood when the upper cabinets are deeper than standard 12". Vent-A-Hood's undercabinet hoods are designed for 12" deep upper cabinets. The extender is used to fill the gap that is created when the installer mounts the hood flush with the front of the non-standard upper cabinets.

This item is stocked at Shady Oak in stainless steel for use with 30" and 36" wide undercabinet hoods in both a 1" and 3" depth to accommodate 13" or 15" common cabinet depths. It can be ordered in any powder coat paint finish as well as various widths/depths. These items will eventually be incorporated in the various price lists. See specifications & models below.

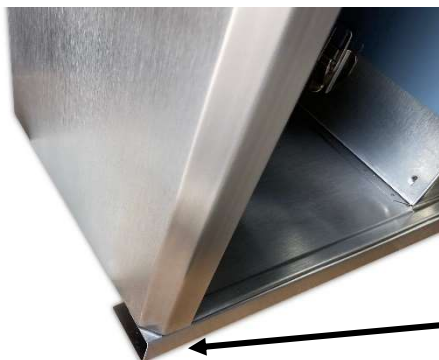

To install this extender, mount it to the wall first and then mount hood to cabinets as explained in the hood's installation instructions. This extender must be installed between cabinets. When used with an SLH style hood, the back corners of the extender may be seen due to beveled edges of hood as shown in photo below. The extender will not have any mounting holes, but it will have one "paint" hole when ordered in a painted finish.

Models	Description
UCE130 **	1" deep, 30" wide
UCE136 **	1" deep, 36" wide
UCE330 **	3" deep, 30" wide
UCE336 **	3" deep, 36" wide

** Insert color to match hood

Extender

The corner of the extender is revealed when used with an SLH9 style hood.
